

Omron Group Environmental Policy

In line with Omron Principles, we will contribute to realizing sustainable societies, globally, by providing eco-friendly products and services that can contribute to the global environment and by efficient management of resources.

1. Provide eco-friendly products and services that can contribute to the global environment

We will provide eco-friendly products and services that can contribute to realizing sustainable societies.

2. Prevent Global Warming

We will continually strive to make improvements to the volume of greenhouse gas emissions generated throughout the value chain.

3. Use resources efficiently

We will make efficient use of resources needed in our manufacturing processes, considering these to be entrusted to our care, in stewardship, by our local and global communities.

4. Co-existence with nature

We will work to prevent pollution, recognizing that water, air and soil pollution leads to the destruction of the natural environment.

5. Implement environmental management

We will continue in the establishment of our corporate environmental management system by: making continual improvements, complying with legal requirements, and holding ourselves accountable by ensuring disclosure of environmental information to our stakeholders.
